INTRODUCTION

ALYATTES (hereinafter referred to as ALYA) Whitepaper has been written as a result of ongoing investigations and other relevant tests.

Due to the continuing innovative developments in the field of Crypto and Blockchain, the ALYA Developer Team reserves the right to make changes and updates to the entire ALYA Project and the Whitepaper when necessary. The Whitepaper published as of now will be kept as it is, and any necessary changes will be released under the Update heading on the following pages.

Consequently, all ALYA users will be given the chance to be informed about the initial conditions and developments at any time in writing.

Due to not actual Informations about Presale & Conditions, ALYA Whitepaper v2.0 needed to be released. Whitepaper v1.0 is still available on GitHub.

WHAT IS ALYATTES?

The Alyattes project was created with a solution-oriented approach based on the ongoing problems of the cryptocurrency market. The Alyattes project was developed to deal with such ongoing problems.

2. What is ALYATTES?

The Alyattes project is a unified project consisting of different platforms. The project is built on 6 major platforms in total. Therefore, it would not be right to evaluate this project by only considering one platform. All these platforms constitute the Alyattes project in a structure that supports each other in this context.

The project aims to spread to the base user group in a structural manner where everyone can easily operate. The project has gathered not only financial instruments that you can evaluate investment opportunities in cryptocurrency and blockchain technology but also sub-platforms that serve in many areas such as games and entertainment applications in our digital life, which make up a large part of our daily life, and social aid projects in which every user is automatically involved.

2. What is ALYATTES?

ALYA Token has been designed for the ecosystem of the ALYATTES project to make transactions between its platforms easier and faster and also to increase functionality and measurability.

The coding in the ALYA Token algorithm has been designed in a decentralized manner without the need for human factor. The algorithm distributes a portion of the deducted commission amounts to the investor, burns some of it to reduce the number in circulation and sends some of it to the ALYA Care wallet to be used for food, education and health expenses of children in need all over the world. 65.27% of the total supply is locked in the mining wallet and will be distributed to miners via a completely decentralized, immutable Smart Contract for a period of approxiametly 5 years, with block rewards automatically distributed to investors.

TECHNICAL INFORMATION

3. Technical Information

3.1 General Information

Token Name	ALYATTES
Symbol	ALYA
Decimal	9
Blockchain	Binance Smart Chain (BEP20)
Contact Address	0x49a9F9A2271d8c5dA44C57e7102ACA79C222F4A9
Maximum Total Supply	205.000.000
Premined	71.200.000 - (29.000.000 Scheduled Burn)
Locked Amount	133.800.000
Mining	YES – PoS & PoA Mining
Mining Duration	1500 Blocks
Smart Contract	YES
Audit Report	YES – Verified by CERTIK

3. Technical Information

3.2. ALYA Auto Eco System (Taxation)

After a long period of investigation, ALYA Developer Team has integrated a unique Auto Ecosystem Coding that does not require any human intervention into ALYA Smart Contract. Thanks to this Coding, it is planned to keep ALYA's popularity, awareness, usability and most importantly profitability constantly updated. Let's take a look at this ecosystems' purpose and how it works.

The ALYA Smart Contract deducts 5% of ALYA on each transfer (TAX Fee). The distribution scheme of this 5% taxation is also foreseen and planned as follows.

2% Burning Tax: In fact, although the same rule applies all over the world, if we bring the subject down to crypto, as every person interested in this market is well-aware, an asset with a low supply will have more value. The 2% ALYA Coin deducted from each transfer is automatically sent to the Burning Wallet with the address 0x000dead, which no one in the world has access to. With this 2% tax deducted, the number of ALYA in circulation is reduced with each transfer, and a continuous and automatic burning system is established.

2% Holders Bonus: One of the main problems that ALYA Developer Team has realized while analysing other cryptocurrencies in the market is that users buy a cryptocurrency in high amounts while its very cheap and put it on sale again in order to make Money even in a small price increase. As a result of our surveys and investigations carried out among cryptocurrency investors, it has been determined that 68% of investors will not pay much attention to the price in a scenario where the number of coins they hold is constantly increasing automatically.

3. Technical Information

3.2. ALYA Auto Eco System (Taxation)

With the automatic code added to the ALYA contract, an amount of 2% deducted from each transfer (excluding 3.3. Excluded Wallets) in the world will be automatically distributed among the people who keep ALYA in their wallet. Therefore, ALYA users will be rewarded just for keeping ALYA in their wallets and they will be able to increase the number of coins they hold without doing anything, which will be an extra source of income for them.

The Holders Bonus is distributed according to the following formula:

$$\text{Holders Bonus} = \frac{\text{Amount Deducted from Transfer}}{\text{Amount in Circulation} \\ (\text{Excluding wallet amounts})} \times \text{Amount hold in the wallet}$$

For a closer look at the excluded wallets, you can review the section 3.3 Excluded Wallets.

3. Technical Information

3.2. ALYA Auto Eco System (Taxation)

1% ALYA Care: The 1% Coin Amount that has been automatically deducted from the transfers will be sent to the wallet named as ALYA Care to create the sustainable finance source of the project.

The detailed information about the ALYA Care Project is explained in the section named as **9. ALYA Care**.

3. Technical Information

3.3. Excluded Wallets

Some wallet addresses determined by the ALYA Team are exempt from the above-mentioned deductions and earnings. The reasons for this exemption are as follows;

Wallets defined in the Tokenomics section such as R&D, Developer Team, Marketing and ALYA Care have a high amount of ALYA in their account. These wallets are exempted from the 2% Holders bonus due to holding large amounts of ALYA, which is against the principle of equality. In addition, the purposes and usage areas of these wallets along with the framework for what they will be used for have been determined. The 5% payment of these wallets is also exempted as it is against the principles of the ALYA project.

Exchange main wallets may also be exempted from this calculation, depending on whether the centralized exchanges reflect the 2% Holders Bonus deducted from the transfers to the users' balances. One of the main problems that has been realized by the ALYA team here is that the centralized exchanges take their account balances from the user wallet and collect them in a single cold wallet. Therefore, they eventually become the largest coin Holders other than the wallets mentioned above, and thus they will receive the largest share of the 2% Holders Bonus.

3. Technical Information

3.3. Excluded Wallets

Platforms that will provide Pool Mining for ALYA will be able to collect balances in a single wallet and gain unfair privileges from 2% Holders Bonus, as in Centralized Exchanges. Hence, such wallets can be exempt from the above-mentioned deductions and earnings according to the companies' terms and conditions that will provide Mining Services.

ALYA Project is completely committed to protecting the interests of individual investors. Thus, it will not bring any company or institution to the fore. Every platform that individual users can benefit from will be included in this calculation and will benefit from the necessary bonuses.

ALYA Developer Team reserves the right to include or not include wallets in the Auto Ecosystem.

PROBLEMS AND SOLUTIONS

4. Problems and Solutions

4.1. Coin Inflation

The main problem that has been realised by the ALYA Team in the field cryptocurrency industry is that the inflation of cryptocurrencies in the market. There is no value withdrawn from the market for coins released from production or central companies. This has generated problems in ensuring the supply-demand balance.

It has been considered that 65% of the total amount of ALYA will be released to the market after the pre-determined 5-term mining. In this way, it is aimed to create a supply-demand balance by withdrawing 2% of each transfer from circulation, thanks to the ecosystem that is added to ALYA's codes which works completely decentralized.

4. Problems and Solutions

4.2. Holders Bonus

One of another problem that has been identified is that people who invest, believe and trust in a cryptocurrency can only benefit from price increases.

Therefore, the decentralized ecosystem added to ALYA codes is planned to distribute the remaining 2% of each transfer in a free and fair way to those who trust ALYA and hold it in their wallets.

For example, an ALYA investor who has 1,000 ALYA in his wallet today may have 1,005 ALYA tomorrow and 1,040 ALYA the next day just by keeping ALYA in his wallet (The numbers are given as an example, they are not binding). This will allow to profit not only from the price increase, but also from the coin inflation.

4. Problems and Solutions

4.3. ALYA Care Foundation

We witness the fact that children pay a heavy price due to financial impossibilities in many parts of the world, for example, in underdeveloped or developing countries and war zones.

In order to compete with such a problem, ALYA Care fund aims to help children in need with a budget of 1% deducted from the transfers and added to the Ecosystem.

Investors who buy, hold, trade and profit from ALYA will help to mitigate this problem without even realizing it.

Let's not forget that the children of today are the rulers of tomorrow.

4. Problems and Solutions

4.4. Memo Feature

Another issue that has been noticed is Cryptocurrency Wallet Management difficulties, which is one of the main problems other than volatility that cryptocurrencies face in commercial integration.

For example, when X company wants to accept a crypto currency as a means of payment, they initially need to create a wallet for each user. Afterwards, they need to withdraw the deposited amounts to their own wallets and ensure the security and maintenance of all wallets. Both transaction fees paid during this transaction is an extra expense.

The unlimited memo feature added to ALYA is the digitized version of the Disclosure feature used in Bank Transfers. During the transfer, the sender can inform the other party about the reason for the transfer via the blockchain with the message (encrypted or unencrypted) entered in the Explanation section.

Thanks to this feature, the aforementioned company can only open 1 wallet and give the relevant code to its users to be written in the Description section. The code will automatically detect who the transaction came from and the reason. Therefore, the company will avoid a large transaction load and expense.

Although the integration of the MEMO feature may seem difficult at first, there is no doubt that it has the potential to open a doorway to many innovations in the coming years.

EXCHANGES AND LISTING PROCESS

ALYA Token has been listed on Pancakeswap at 5th January 2020 after Presale Distribution with a locked Liquidity in ALYA/BNB Pair.

Liquidity is going to be locked after locking period 100% again if there is no scheduled listings on CEXs. In case of a listing on a CEX, necessary part for Marketmaker Services are going to be deducted and the other part is going to be locked again.

Although the ALYA team has started negotiations with centralized global crypto exchanges as of now, the first decentralized exchange listing will take place at the end of the estimated second mining period (6 months after the coin distribution). This date can be brought forward or postponed, upon the ALYA teams deems necessary, in line with the needs and demands of ALYA supporters.

The ALYA Team will receive and evaluate the opinions of ALYA Miners and ALYA Investors on social media about the listing process.

TOKEN ECONOMY

ALYA's Token Economy is indicated in the table and graph shown below. For more details about the Token Economy and its anticipated usage areas, please visit **7. Economy Wallets and Disclosures** section.

6. Token Economy

Purpose of Usage	Share in Total	Number of Coins
Airdrop	2,44 %	5,000,000.00
Developer Team	2,44 %	5,000,000.00
Marketing	4,88 %	10,000,000.00
Research & Development	2,93 %	5,000,000.00
ALYA Care	2,93 %	6,000,000.00
BURN Wallet	13,61 %	27,000,000.00
Alya Finance	0,49 %	1,000,000.00
Other	1.951220 %	4,000,000.00
Mining	65.268293 %	133,800,00.00
Total	100.00 %	205,000,000.00

6. Token Economy

ECONOMY WALLETS AND DISCLOSURES

7. Economy Wallets and Disclosures

The ALYA team foresees Wallets in the Token Economy and all their usage areas as stated below. These wallets, together with their addresses, will be added to the Whitepaper before the Token Listing and will be visible for everyone.

The ALYA Team can make gradual sales from the specified wallets in order to avoid a possible Pump-Dump incident and to ensure that ALYA progresses slowly but firmly and confidently in its own goal. However, the incomes generated from these sales will ABSOLUTELY be used for the stated purposes.

All wallets mentioned here have been removed from Auto Ecosystem since day one. As a result of this, these wallets were prevented from getting a large share of Holders bonuses. Accordingly, the auto ecosystem will not be applied for transfers to be made from these wallets.

7. Economy Wallets and Disclosures

7.1. Airdrop Wallet

Wallet Address: 0x825ff980780801719e560DE290814E98117c01CF

There are 5,000,000 ALYA coins in this wallet. The coins will contribute to the awareness of ALYA, strengthen their social media accounts, and be allocated to be distributed for different purposes. During the use of this budget, not only new users, but also users who already have ALYA will be taken into account.

7. Economy Wallets and Disclosures

7.2. Developer Team Wallet

Wallet Address: 0x58dEDa0EbC7255C3997113eDB1162a53A1865f72

This wallet contains 5,000,000 ALYA belonging to the Developer Team. ALYA team has no personal share or right in any wallet other than this wallet. Coins in this wallet can be moved by consensus of the entire team. The final transaction envisaged for this wallet will be Sale. If the ALYA team agrees, an amount of this wallet will be staked.

1,000,000 ALYA will be sent to Mining from this wallet for the Developer Team. Apart from these awards, the Developer Team will not have a personal source of financial gain.

7. Economy Wallets and Disclosures

7.3. R&D Wallet

Wallet Address: 0xAeCc1891De99B99D2d9d3204B5666bd3e15E0fEA

This wallet contains 6,000,000 ALYA to support the Research and Development operations. The development of the projects specified in the Roadmap, the creation of financial resources for these projects, the financing of the software team, the funds required for technical cooperation are in the task and usage definition of this wallet.

7. Economy Wallets and Disclosures

7.4. Marketing Wallet

Wallet Address: 0x077Be08c114d10128DC5721F342eF38471479cA4

This wallet contains 10,000,000 ALYA. The job description of this wallet includes financing all advertising works, promotional articles, all live events and banners to be published in the professional crypto-related sites such as BSCScan, Coinecko. In addition, the expenses of Sponsorship agreements and upcoming Exchange Listings will be covered from this wallet.

7. Economy Wallets and Disclosures

7.5. ALYA Care Wallet

Wallet Address: 0x7fEc4Ea343A1E948604772e4f42609bD74B5eD87

ALYA Care project is the project that ALYA team values most. Although it may come to mind at first that ALYA Care was created to support the ALYA Project, the ALYA Care project is the main project that sits at the very center of ALYA. For a detailed introduction to this project please visit **12. Alya Care** section.

6,000,000 ALYA has been allocated for the funding of the ALYA Care project, and this fund has been made sustainable with 1% taxation added to the auto ecosystem.

7. Economy Wallets and Disclosures

7.6. Other Transactions Wallet

Wallet Address: 0xbF36E153aB00A6a7c5db38639859067472105bbD

This wallet contains 4,000,000 ALYA which is allocated to cover any expenditure or promotion not described above. This wallet will support R&D & Marketing & Airdrop wallets as needed.

7. Economy Wallets and Disclosures

7.7. Mining Wallet

The mining wallet has 133,800,000 ALYAs, 65.27% of the total number of ALYAs. No one, including the Developer Team, has access to this wallet. When the specified reward conditions for mining are met, the determined amount will be automatically distributed from this wallet with the Smart Contract feature. For mining details please visit **8. ALYA Mining** section.

7. Economy Wallets and Disclosures

7.8. Burn Wallet

Burn Wallet is the wallet where the coins that will not be used after the pre-sale process are collected and entire amount of Alya Tokens in that Wallet will be burned in a scheduled Burn Program. This Wallet is locked via Pinklock.

7. Economy Wallets and Disclosures

7.9. ALYA Finance Wallet

ALYA Finance wallet is the wallet with 1,000,000 Alya Tokens defined from the developer team wallet for mining, which will be established as a source of income for the ALYA developer team.

ALYATTES WHITEPAPER | 2022

ALYA MINING

8. Alya Mining

ALYA Mining is basically created by combining two systems (Proof of Stake & Proof of Active) and anyone in the world can do the mining. There is no need for any license or wallet definition to do mining.

ALYA Mining is connected to an algorithm that is completely decentralized and not under anyone's control. This algorithm is also integrated into the system in the form of a Smart Contract.

Generally speaking, a Block is generated every 5-7 seconds on the Binance Smart Chain network, and each block has its own Hash Code. No one knows what will happen and what value these codes will take before they are generated. This code is automatically identified by the Binance Chain network.

8. Alya Mining

8.1. Mining Scheme

ALYA's Smart Contract constantly monitors the blocks in the Binance Chain network and converts the Hash Code of each block found from HEX to DEX value. If the remainder is 1 when the resulting 18-character number is divided by the specified mode (29743), it means the lucky block is found and a signal is sent to the miners to prove their activity. It automatically allocates the amount of ALYA specified in the Contract Reward Plan to the miners who prove their activity with respect to total staking amount until 100 more Blocks are found. All these processes take an average of 8-15 minutes.

Although finding a Lucky Block corresponds to an average of 25 rewards per month, as the number stated above are left out of control, this amount may increase or decrease. The block can be received in 5 awards in 1 day, as well as in only 1 award in 5 days, and the decentralization of the work is guaranteed in this way.

The amount of reward to be distributed in each block is fixed. The amount of reward miners receive may increase or decrease depending on changes in Total Staking rate.

It is designed to produce a total of 133,800,000 ALYA over 5 periods, as indicated in the diagram below.

8. Alya Mining

8.1. Mining Scheme

Period	Block Number	Rewards in Each Block	Total Production
Period 1	0 - 300	58,000	17,400,000
Period 2	301 - 600	81,000	24,300,000
Period 3	601 - 900	98,000	29,400,000
Period 4	901 - 1,200	109,000	32,700,000
Period 5	1,201 - 1,500	100,000	30,000,000

ALYA Token is a type of mining based on an ordinary computer connected to the internet, and earning rewards according to the amount of activity and stake you will make with the mining program which will set up in minutes.

You can start your mining by downloading the ALYA Mining program and sending the ALYAs (minimum 500 ALYA) you keep in a decentralized wallet (TrustWallet & Metamask) to the Smart Contract. You also need to keep the BNB fees required to receive mining rewards and provide proof of activity in your own wallet. The computer on which the mining program is installed must be connected to the internet and open 24 hours a day, 7 days a week. Otherwise, Proof of Activity cannot be presented to block rewards and mining rewards will not be awarded.

Since ALYA Mining program is based on Proof of Stake and Proof of Active, it does not need any extra power usage, energy expenditure or hardware power. Only the energy consumption of your computer is sufficient for mining.

ALYA Mining is also possible on Virtual Computers, although it is not recommended by us for security reasons.

8. Alya Mining

8.3. Pool Mining

It is a type of mining created and managed by companies that provide pool mining services. This is generally preferred by people who do not have a computer and not want to rent a server or follow the mining program all the time. This type of mining is controlled by a centralized system and its conditions are determined by the companies providing this service, not by the ALYA team.

Pool mining allows people to start mining with smaller amounts and to stake again even though their earnings are below the minimum. On the other hand, Network Marketing, which is one of the most effective ways of marketing in the world, will enable people who have become professionals in this business to both expand their mining pools and earn passive income by promoting ALYA.

The first platform where pool mining can be done is ALYA FINANCE Platform. Business partners that will participate in Pool Mining in the future will also be supported by the ALYA team.

8. Alya Mining

8.3. Pool Mining

ALYA Finance will act completely user-oriented in the Network earnings of Pool mining and will not make any extra profits other than the Expenses (Mining servers, Security, Reward signing and distribution fees, Platform server fees, etc.). Therefore, the fee that will be charged by ALYA Finance on the mining platform will be kept to a minimum, and all other rewards will be distributed to users.

ALYA Finance Pool Mining will never distribute more than it produces. Therefore, it will definitely be prevented from entering into ponziization or similar ways. The tracking of ALYA Finance mines will be completely transparent and can be tracked on BSCScan at any time.

ALYA CARE

9. ALYA Care

9.1. ALYA Care Foundation and Purpose

The ALYATTES project does not see crypto assets only as a means of value or exchange. It also believes in the transformative power of these digital assets. One of the aims of creating our project is to reduce social inequalities that increases as a result of information age and to reach the people in need of social assistance without discrimination (religion, language, race, gender, etc.).

ALYA Care was established based on this philosophy. ALYA Care will be formalized with foundations to be established in various countries around the world, and all accounts will be audited by the official institutions of the countries in which the foundations will be established.

9. ALYA Care

9.1. ALYA Care Foundation and Purpose

The funds that will be generated thanks to the natural structure of Alyattes will be used for children in need of financial and social assistance around the world, especially in underdeveloped African countries. For the benefit of all humanity and our future, we must turn these children into healthy individuals who can think and produce in every field. Therefore, it is among our priorities to work as a stakeholder with Non-Governmental Organizations that work in a transparent and accountable manner with sustainable aid and development goals. The Alya Care team follow closely the work of major organizations such as Save the Children, Doctors Without Borders and World Vision, which mainly work in the field of Child Welfare. As Alya Care, our mission is to contribute and support the work of similar organizations.

In this context, our main mission is to touch the lives of children in need of help in the most diverse and remote parts of the world by using the indirect income generated from the high usage area of Alya due to its natural structure, the funds consisting of tokens burned and the masses growing anonymously.

9. ALYA Care

9.2. ALYA Care Fund

ALYA CARE needs regular funding in order to provide aid in line with its establishment purpose. Thanks to the ALYATTES project, ALYA CARE has overcome the fundraising problem, which is the main problem of many aid organizations. Of course, we accept fund supports from other companies and individuals, such as other charity organizations, if they comply with the company terms. Nevertheless, we generate our main funding source from 1% of ALYA Token transfers.

ALYATTES WHITEPAPER | 2022

ALYA FINANCE

ALYA Finance consists of a structure that incorporates several platforms of the ALYATTES project. As the name reveals, all financial-based operations of the ALYA project will be published and managed through this platform. Although these processes will start with Pool mining, where users can make ALYA mining by staking below the minimum, Yield Farming, Farming, Soft Stake and many similar services will be offered to the platform users in the future.

ALYA Finance Platform will be put into service with a wonderful ALYA mining plan that will provide Passive Income to users with referral and production bonuses. The platform will never distribute more than it produces.

Other cryptocurrencies, which we think have a bright future, will be followed up and investigated by our Research and Development team. Then, these cryptocurrencies will be produced at the amounts and rates determined by the ALYA team through ALYA Farm. Eventually, it will be possible to own other coins by only having ALYA.

Additionally, a special group of experts within the Research and Development team will examine the most promising coins that are in the ICO, IDO and Pre-Sales process. After checking the reliability of such coins and projects, they will be published on this platform. Thus, necessary steps will be taken by us to grant privileges to ALYA Finance users.

ALYA Wallet

ALYA Wallet is a simple yet effective decentralized cryptocurrency wallet that helps you store your cryptocurrencies. The Private Keys that will be created in this wallet will make sure that the wallet will be completely under your control. It offers quite simple and user-friendly features that anyone can use. ALYA Wallet is very easy to install and use. It is a ready-to-use wallet in seconds.

11. ALYA Wallet

Alya wallet allows the store not only ALYA Token but other cryptocurrencies. In this way, you can send and receive not just one or two cryptocurrencies, but multiple cryptocurrencies with. The main issue that users should pay particular attention is to save and not lose Private Keys, as in other wallets. You can use ALYA Swap and other decentralized exchanges (DEX) directly through ALYA Wallet.

ALYA Wallet will contribute to the ecosystem by increasing the awareness of ALYA in the first step. People who use ALYA Wallet will be able to benefit from the Airdrops, and promotions that will be carried out to encourage them to use ALYA Wallet.

ALYA Fun

As it is well-known, very large capitals are circulating in the world of gaming industry. It is a sector in which almost every smart phone user is involved consciously or unconsciously. ALYA Fun project is the general name of the ALYA Team's developments in the field of Game and Entertainment.

Although ALYA Fun Team started with small free games that can be played online and offline at first, ALYA Token will be incorporated in other projects by using systems such as Coinpayments in the future.

ALYA Fun platform has been developed with a very wide range of products. The list of games has only started with little fun games for now. The list of games will be extended further with Scratchcard, weekly Lotto and Online Casino where very high prizes are awarded after concluding the legal processes and obtaining the necessary permissions. Although the legal processes and procedures required for these operations will be put into effect after the Pre-Sales, the necessary negotiations with the software developer companies have already started.

12. ALYA Fun

ALYA Fun platform has no limits. It will be constantly developed, updated, and presented to you, our valuable users, by keeping profit and entertainment always at the forefront.

12. ALYA Fun

It is the common opinion of the whole team that the contribution of the ALYA Fun system to the ALYA ecosystem will be much more than anticipated. In order to ensure this contribution, ALYA payments will be made much more advantageous compared to other crypto or FIAT currencies in all payments made within the system aiming to increase interest and demand for ALYA. For example, a 20% discount will be offered for all payments made as ALYA. Thanks to the internal developed SWAP system, the conversion of other investment instruments to ALYA will be completed with just a few clicks.

ALYA - AI Trading

The image shows a laptop and a smartphone displaying the Alyattes AI Trading platform. The laptop screen features a dark-themed dashboard with a line graph showing price fluctuations over time (x-axis from 100 to 500). A callout bubble indicates a profit of \$920.00. Below the graph are two smaller charts labeled 'Lowest peak' and 'Dolor sit' with values 398 and 64 respectively. On the right side of the laptop screen, there is a 'Settings' section with three sliders. The smartphone screen shows a list of trading pairs with their current values and percentage changes. The top item is 'Lorem ipsum' at \$236,678.25. Other items include 'Lorem' at \$1,298.50, 'Ipsum' at \$198.50, 'Dolor' at \$1,298.50, 'Amet' at \$198.50, and another 'Lorem' entry at \$1,298.50.

Symbol	Value	Change (%)
>Lorem ipsum	\$236,678.25	-
Ipsum	\$198.50	-
Dolor	\$1,298.50	-
Amet	\$198.50	-
Placeholder	\$1,298.50	-
Placeholder	\$1,298.50	-

13. ALYA - AI Trading

It is a platform supported by a special team within the ALYA Token developer team in the ALYATTES project. This platform was originally established to provide convenience to users who are not cryptocurrency traders.

As mentioned above, we aim to provide a service where short, medium and long-term signals and even margin signals coming from the system prepared by a special team are presented to users. The first designed structure is to enable them to participate in professional trades in a few seconds without transferring funds from accounts via API connection. In the following processes, a stronger structure will be created by supporting ALYA-AI mobile version and ALYA-AI Bot (Algorithym Trade) service.

13. ALYA - AI Trading

For example, ALYA users who are entitled to use the ALYA AI Trading Platform or make the necessary payments will allow the ALYA AI Trading Platform to connect to the API they will create by only giving Trade permission to the USDT and BTC balances they hold in their own Binance/OkEX/Bitmart accounts. Then, the signals examined by expert Traders on the platform will be entered into the system. Afterwards, users will be able to examine these signals with instant notifications they receive via E-Mail and Social Media accounts. Eventually, they can start a Trade directly from the ALYA Platform and change on the entry and Target points as they wish.

The operating system will be free of charge for users who hold certain amounts of ALYA Tokens. Nevertheless, other people will also be able to benefit from this service in exchange for a certain amount of ALYA Tokens.

The users will be informed about the upcoming ICOs and projects in the cryptocurrency market through this platform.

ALYA Swap

In Cryptology Swap is the instant exchange of any asset supported by the trading platform for any other supported digital asset. For example, you can exchange BNB for ALYA or ALYA for BUSD, depending on your preference.

14. ALYA – Swap

ALYA SWAP platform is a clearing platform developed by the Alyattes team and focused on making ALYA investors win. ALYA will be the main coin of this platform, which is an automatic market maker (AMM) that allows binary token exchange on a Mainnet.

The coding process of this platform has been started and this will be the technical development part that creates the most workload for the software team as the system needs to be error-free. The network on which this platform will be implemented will be announced after the final tests.

An extra source of income will be generated to the users with the coins to be published on the ALYA SWAP Platform and the participation in the liquidity pools of these coins. The platform will also allow to trade coins in very simplified steps.

14. ALYA – Swap

ALYA Swap will allow all users to create Farming Platforms and will accept ALYA Token as a payment unit in the establishment of such platforms. This will increase the number of ALYA users and will give a new usage area to ALYA Token.

In the future, it will be possible to use more than one Blockchain network on ALYA Swap, if the Inter-Blockchain Tunnel installation system, whose tests have not yet been concluded, allows. The aforementioned Tunnel System is not developed by the ALYA team, but by the experts of the subject.

ALYA Exchange (ALYA.Ex)

15. ALYA Exchange (ALYA.Ex)

ALYA Exchange platform will be an Exchange platform that will be built on the main working system of known centralized cryptocurrency exchanges.

ALYA Exchange will be incorporated in Malta, where Binance, the world's leading cryptocurrency exchange, is also headquartered and necessary legal permissions will be obtained through this company.

Leveraged Margin Transactions, Stake Pools, Futures Crypto Trades as well as conventional trading transactions will be available to users on ALYA Ex.

Advantages will be provided to those who pay their transaction fees with ALYA in the Exchange, and services such as 0% transaction fee will be offered to ALYA lovers, as well as users who keep a certain amount of ALYA under Stake.

15. ALYA Exchange (ALYA.Ex)

Advantages such as 0% transaction fee, weekly extra ALYA earnings and future collaborations with Virtual Crypto Credit Card and even physical Credit Cards connected directly to Alya Ex account will be provided to those who pay their transaction fees with ALYA on the exchange and who keep a certain amount of ALYA Staked.

ALYA Ex Platform will ask other developer teams to buy ALYA and keep it locked instead of demanding a very high amount of FIAT or other cryptocurrency in new coin listings. All listing fees will be realized through ALYA Token, thus providing another usage area for ALYA Token.

Another answer will be given to the question "Why should I buy ALYA?".

Concluding Remarks

Concluding Remarks

The projects mentioned in this Whitepaper are not the entire ALYATTES project.

There are several other projects that the R&D team is working on technically. These will be prepared and integrated into the ALYATTES project in the future. In these developments and integrations, the value and usage area that will be added to the ALYA Token will always be kept as priority.

The whitepaper has been prepared to give users an idea about the ways that will be followed in the ALYATTES project.

The ALYATTES project is much more than a cryptocurrency or a platform. The concept of social people will take the name ALYATTES in the digital environment, and will not hesitate to fulfil its social obligations all over the world while making its way to continuously making money for its investors...

We can't foresee the future, but we are glad to try to provide
a better future to everyone.

ALYATTES TEAM
